SUMMARY

Frontend engineer specializing in React and Next.js, with a focus on offline-first architecture, accessibility, and shipping complete products end-to-end — from requirements through deployment. Currently leading frontend work at CrystalLattice Limited, where I was brought onsite to train the development team now building the product with me.

EXPERIENCE

Lead Frontend Engineer & Software Development Trainer — CrystalLattice Limited (startup)

Jan 2026 – Present · Uyo, Nigeria (remote Jan–May; onsite from Jun 2026)

- Joined remotely to conduct project and code reviews; brought onsite when the company opened its Uyo office to train its incoming developers and lead frontend on a new product.
- Trained 4 developers from fundamentals through shipping production features — all 4 are now part of the team building the product with me.
- Own frontend architecture in React/Next.js: component structure, state management approach, and code review standards.

Frontend Engineer — Freelance (Remote)

2024 – Jan 2026

- Built **HandyHire**, a marketplace connecting clients with verified skilled workers across Nigeria: multi-role dashboards, job posting flows, verification screens, and real-time chat UI in Next.js, with a shared component library across client and worker views. Onboarded **120+ verified artisans** and a **74-client waitlist** ahead of the September 2026 launch. handyhire-three.vercel.app
- Delivered 3 client projects end-to-end: requirements, UI build, REST API integration, authentication, and deployment, working asynchronously via Git, GitHub, and Vercel.

SELECTED PROJECTS

MedMinder — offline-first medication reminder PWA for caregivers and older adults

- Local-first architecture: installable PWA with a hand-written service worker and background sync, so reminders fire reliably without a connection (Dexie/IndexedDB, Zustand).
- Pure, deterministic scheduling engine handling snooze caps and missed-dose grace windows — fully unit-tested (Vitest + React Testing Library).
- AI label scanning: photographing a prescription label pre-fills the medication form via a Claude integration, with all inferred fields flagged for human review.
- Designed for older users: WCAG AA contrast, large touch targets, single-step confirmations.

AI Resume Reviewer — 3MTT × Darey.io program.

- Full-stack resume review tool: Next.js, PostgreSQL, LLM integration with streamed responses and persisted results. Owned prompt design and the streaming UI. [GitHub](#) · [Demo video](#)

EARLIER CAREER (2016 – 2024)

- **Survey & census field roles** — **National Population Commission / Nigeria DHS** (2021–2024, seasonal): standardized CAPI data collection and M&E roles across rural and urban areas of Rivers State on national and USAID-funded health surveys.
- **Corporate Manager** — **Stavros Oil & Marine Ltd, Port Harcourt** (2020–2021): led and trained an operations team; ran regular staff training sessions, the foundation of my current developer-training work.
- **Android Development Intern** — **Start Innovation Hub, Uyo** (2019–2020): first formal software training; active in the local tech community (GDG Uyo).
- **Secondary School Teacher** — **Maths & Computer Studies** (2017–2019): classroom teaching after national service.
- **NYSC, Kogi State** (2016–2017): elected President of the SDGs Community Development Service group.

TECHNICAL SKILLS

Frontend: TypeScript, React, Next.js (App Router), Redux, Zustand, Tailwind CSS

Backend & Data: Node.js, Express, REST APIs, PostgreSQL, MongoDB, IndexedDB

Testing & Tooling: Vitest, React Testing Library, Git/GitHub, Vercel, Claude Code

EDUCATION & TRAINING

B.Sc. Electronics and Computer Technology — University of Calabar, 2015

- ALX Software Engineering — Frontend Specialization (2023)
- Andela React Learning Program (2023)
- 3MTT × Darey.io Software Development Program (2024–2025)
